Summary

Full Stack Software Engineer with hands-on experience building and deploying scalable applications using **TypeScript, Node.js, React.js, and Next.js**. Experienced in developing **REST APIs, microservices, database-driven systems, and third-party API integrations**. Built AI-powered applications using **LLMs, OpenAI SDK, Model Context Protocol (MCP), RAG, prompt engineering, and workflow automation**, with a strong foundation in **data structures, algorithms, SQL/databases, and backend systems**.

Experience

Easecommerce **06/2025 – 08/2025**
Backend Developer Intern *Bengaluru, Karnataka*

- Spearheaded the migration of **50+ production REST APIs** from a monolithic Express.js architecture to modular **NestJS microservices**, improving backend scalability and maintainability.
- Identified and resolved performance bottlenecks across API routing and database interactions, reducing average response latency by $\sim$**20%** for production workloads.
- Collaborated with senior engineers to design and execute a **zero-downtime deployment** strategy, maintaining **99.9% uptime** for active users throughout the migration.

Technical Skills

Languages: TypeScript, JavaScript, C++, SQL

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS

Backend & APIs: Node.js, NestJS, Express.js, REST APIs, Socket.IO, Apache Kafka

Databases: PostgreSQL, MongoDB, Redis, Pinecone, Qdrant, Prisma ORM, Drizzle ORM

AI & Agentic Systems: OpenAI SDK, OpenRouter AI, Model Context Protocol (MCP), RAG, Prompt Engineering, Inngest

DevOps & Tools: Docker, Git, Linux, AWS EC2

Projects

Arbell: Agentic Commerce Platform – Razorpay Buildathon [https://arbell-one.vercel.app/]

- Architected a scalable commerce platform using **Next.js and TypeScript**, enabling conversational product discovery and execution of commerce workflows through an AI agent.
- Built a custom **Model Context Protocol (MCP) server** with specialized tools for structured interaction between the application and external commerce services.
- Integrated **Razorpay's Agentic Payments API** using the **Single-Block Multiple-Debit (SBMD)** framework, enabling secure one-time authorization with multi-debit checkout flows.

CodeDog: AI Agent for Automated GitHub PR Reviews [https://code-dog-nvoq.vercel.app]

- Architected an automated GitHub code review platform using **Next.js 16 and TypeScript**, integrating **OpenRouter AI** for automated pull request analysis.
- Decreased average pull request review time by **50%** by delivering immediate automated code analysis to developers.
- Engineered GitHub webhook processing using **Inngest** background jobs, with **PostgreSQL** persistence through Prisma ORM and Razorpay subscription integration.

TraceKaf: Real-Time Location Tracking System

- Built a real-time location tracking engine using **Node.js and Socket.IO**, broadcasting live GPS coordinates to a map at **5-second intervals**.
- Integrated **Apache Kafka** as a distributed message broker to decouple location ingestion and processing, eliminating latency bottlenecks for concurrent updates.
- Implemented secure real-time communication using custom **OAuth2 middleware and JWT-based authorization** for authenticated socket connections.

Education

Bennett University **2023 – 2027**
Bachelor of Technology (B.Tech) *Greater Noida, India*

- **CGPA: 8.26**
- Awarded **35% Merit-Based Scholarship** for four consecutive academic years.
- **Relevant Coursework:** Data Structures, Computer Networks, Operating Systems, Database Management Systems
